

|   |   |
|---|---|
| <b>Course Name</b>                                  | <b>Essentials of C Programming</b>  |
| <b>Required Software</b>                            | <b>Visual Studio Code with wsl enabled</b>  |
| <b>Syllabus</b>                                     | <ol style="list-style-type: none"> <li> <b>1. Introduction to C Programming</b><br/> History, C Standards, Building a C Program<br/> <b>Language Basics</b><br/> Keywords, Variables and Rules for naming variables, Identifiers, Data Types, Qualifiers – signed, unsigned, short, long, Constants - Numeric, Character, String and Enumeration, Type conversions – Implicit and Explicit type conversion, Type casting </li> <li> <b>2. Operators &amp; Flow Control</b><br/> Arithmetic Operators, Relational Operators, Assignment Operators, Increment and Decrement Operators, Logical Operators, Bitwise Operators, Conditional operators, Special Operators , Precedence and Associativity of operators<br/> <b>Flow Control</b><br/> Conditionals / Decision Making- if statement, if-else statement, conditional (ternary) operator, Nested if-else, else if ladder, Switch case<br/> Loops- for loop, while loop, do-while loop, break, continue and goto </li> <li> <b>3. Preprocessors, Arrays, Strings &amp; Functions</b><br/> <b>Role of Preprocessor</b><br/> Preprocessor directives and their usage, Symbolic constants, Macros and Macro functions<br/> <b>Arrays</b><br/> 1D Arrays – Creation and initialization, accessing array members – read/write operations, random access, 2D Arrays – creation, initialization, Traversing 2D Arrays, random access<br/> <b>Strings</b><br/> Declaring string and importance of Null char termination, Reading and writing strings, String handling routines in the standard library, Passing strings to functions<br/> <b>Functions</b><br/> Function prototype, function body and function call, Parameter passing, By value and by address, passing arrays and structures, Returning values from functions, Recursion </li> <li> <b>4. Pointers in C</b><br/> Pointer to basic data types, Types of pointers, significance of NULL pointer, Pointers and structures, ` Pointer to structure variables, Member access, arrow operator, Significance of dynamic memory, Dynamic Memory APIs from std library, Pointers and Dynamic memory allocation </li> <li> <b>5. Structures, Unions, file Handling &amp; Code Style &amp; Best Practices</b><br/> <b>Structures &amp; Unions</b><br/> Creating Structures, Declaring Variables, Initialization, Member Access, dot and arrow operators, Anonymous structures, typedef usage, Array of structures, Arrays within structure, Union and its usage<br/> <b>File Handling</b><br/> Simple I/O operations, Formatted I/O: printf() and scanf(), Character I/O: getchar() and putchar(), Format specifiers, Command line arguments<br/> <b>Code Style &amp; Best practices</b><br/> Code style guidelines – Indentation, Naming Conventions, Meaningful Names, Best practices for writing C programs </li> </ol> |
| <b>Mandatory Assignment</b>                         | <ul style="list-style-type: none"> <li>Daily activities shared after the session needs to be submitted within timelines.</li> <li><a href="#">Learn C   Discover our Courses - Sololearn</a></li> </ul>   |
| <b>End Module Assessment</b>                        | MCQ based Hacker earth assessment with Camera enabled.  |
| <b>Additional Learning &amp; Practice Resources</b> | <a href="#">C Programming Language Tutorial - GeeksforGeeks</a><br><a href="#">Learn C Programming</a><br><a href="#">C Tutorial - Learn C Programming</a><br><a href="#">C Tutorial - Learn C - Cprogramming.com</a>   |
